## Message

I am indeed happy to know that the School of Management Sciences, Technical Campus, Lucknow is organizing 3<sup>rd</sup> International Seminar on Sources on Planet Energy, Environmental & Disaster Science : Challenges and Strategies (SPEEDS-2016) on 19<sup>th</sup> and 20<sup>th</sup> November, 2016 in association with The Institution of Engineers (I), UP State Center Lucknow and Council of Science & Technology, Lucknow.

We are aware that preservation of earth and environment is highly essential for life. The facts of climate change need our urgent attention, especially in India which is a developing country. Now at this time we need to create awareness among the masses as well as we need to deal with facts of deforestation, increasing temperature, rising sea levels and sinking ground water levels besides other natural calamities which may bring troubles in due course of time. It is needed to give a deep thought on development at the cost of nature.

I extend my best wishes on the occasion.
